

Create an idea for a website

Outline how I'm going to make sure I'm following code conventions

Do research on other websites

Describe purpose and intended audience:

Intended audience: Young adults

Purpose: entertainment

Key considerations and research:

Blind people: they will be unable to properly experience the website as much of it is visual

Colour blind people: they will be able to experience most of the website as I will use contrasting colours for the text and background

Copyright: I will avoid this issue by making my own images out of other images using photoshop

Aesthetics: intentionally messy but the UI will be clean and easy to navigate

Write up:

I began from scratch taking parts from my previous project: a website for the school cafe

After getting formatting done I began working on making it look good

I chose Heebo as the main font as it looks good and is readable and Acme for my header as it is more interesting to look at.

I chose my colours the way I did based on a piece of artwork I did a few years ago on which I am basing my website upon.

I added links to social media, however since I did not have social media accounts on most of these sites I decided just to redirect the user to the main page of the given website

```
<!-- social media, but because I do not have public and or buisness accounts for these websites they lead to the home page of each site -->
<div class="footer">
  <a href="https://www.facebook.com/"></a>
  <a href="https://twitter.com/"></a>
  <a href="https://www.instagram.com/"></a>
  <br>Luke 2020
</div>
```

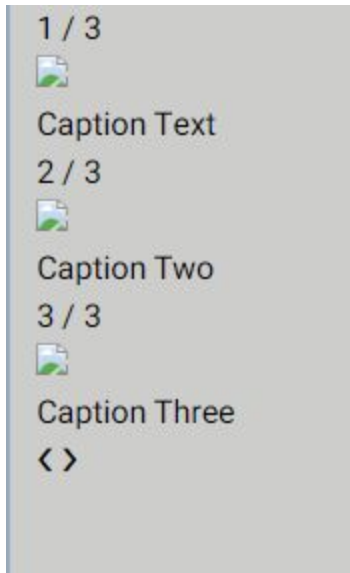

At this point I decided to use a shifting animated gradient instead of a landscape image for the background generated with [Gradient animator.com](https://gradientanimator.com)

the alternate text for all the social media links was Facebook link, now the alternate text is accurate

```
<div class="footer">
  <a href="https://www.facebook.com/"></a>
  <a href="https://twitter.com/"></a>
  <a href="https://www.instagram.com/"></a>
  <br>Luke 2020
</div>
```

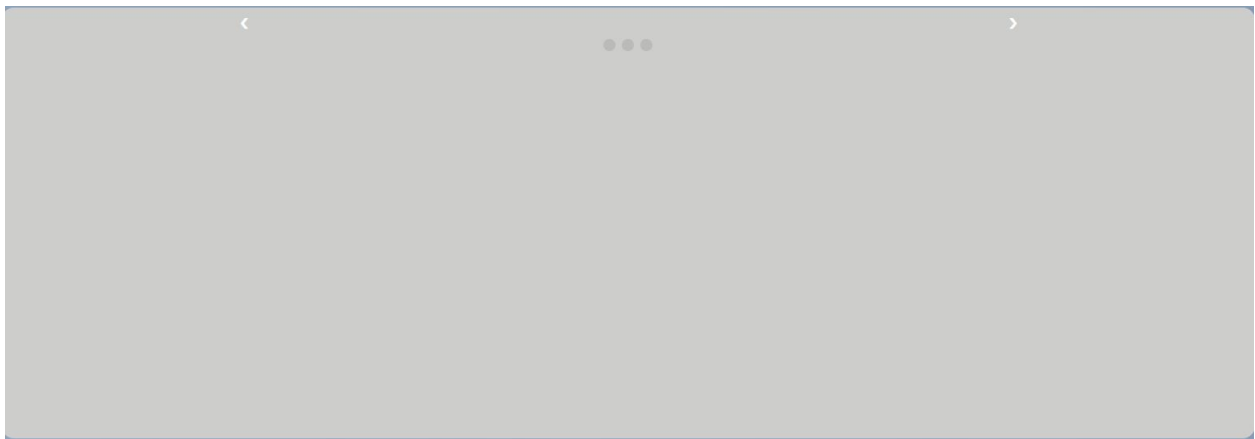

At this point I decided I would add a page for my contact info

An issue occurred with my slideshow but I think it was just because of bad indenting

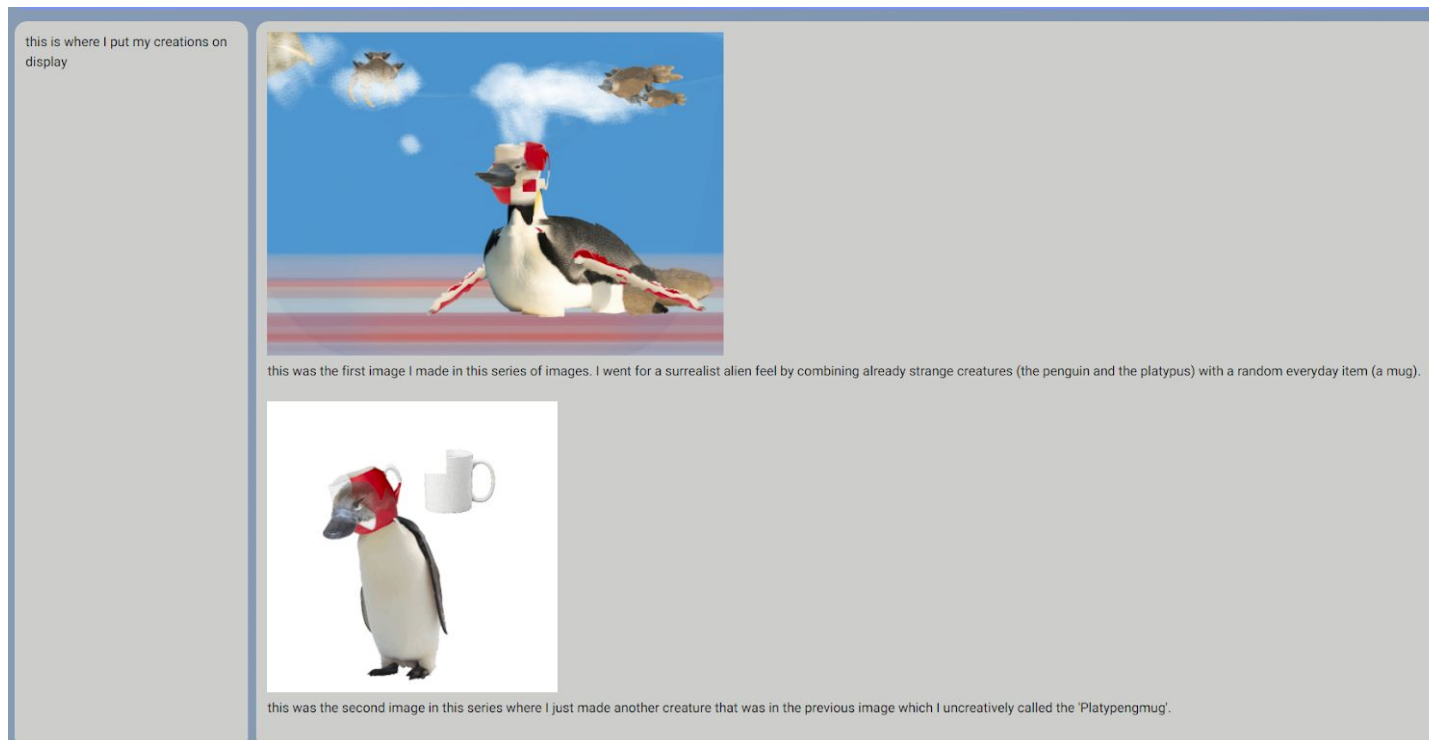

I forgot the css

I added the css but it appears something else has gone wrong

The images aren't showing

After some frustrations I decided it would be best to not use a slideshow and instead I would just show the images and let the user scroll through them

```
<div class="side">
  this is where I put my creations on display
</div>

<div class="main">
  <br>
  this was the first image I made in this series of images. I went for a surrealist alien feel by combining already strange creatures (the penguin and the platypus) with a random everyday item (a mug).<br><br>
  <br>
  this was the second image in this series where I just made another creature that was in the previous image which I uncreatively called the 'Platypenguin'.<br><br>
</div>
```

It may not look the best but it works well and is time efficient

I decided to make my email address bold to increase visibility

```
<div class="main">
  You can contact me at: <strong>Lookpuke2003@gmail.com</strong>
</div>
```

You can contact me at: **Lookpuke2003@gmail.com**
